

Software Testing

What is Software Testing?

Definition:

1. is an investigation conducted to provide stakeholders with information about the quality of the product or service under test.
2. provides an objective, independent view of the software to allow the business to appreciate and understand the risks of software implementation

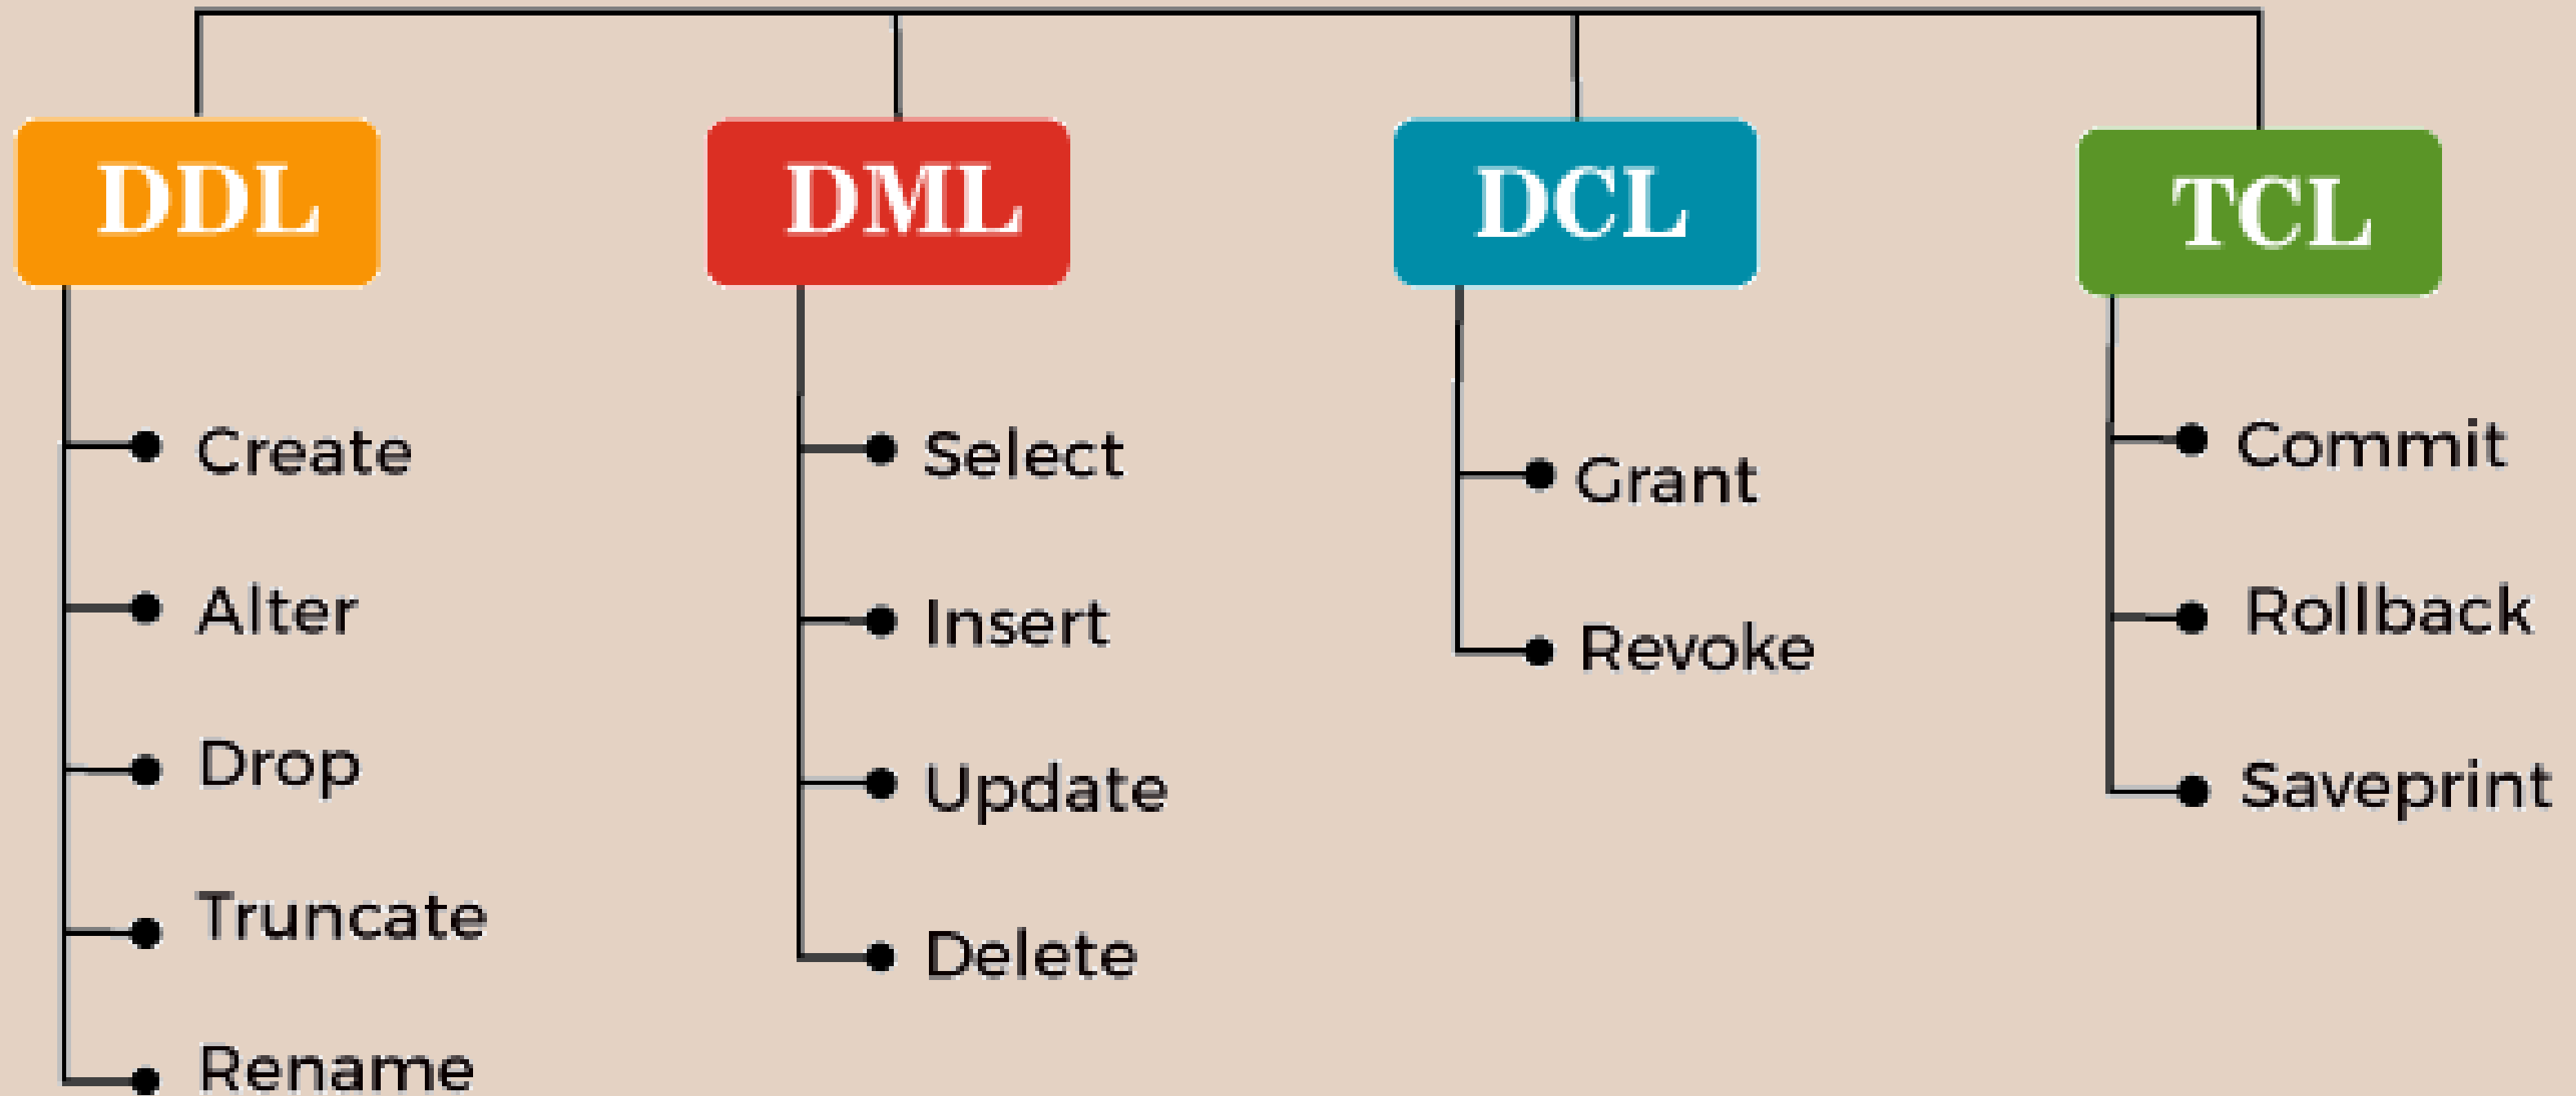

SQL

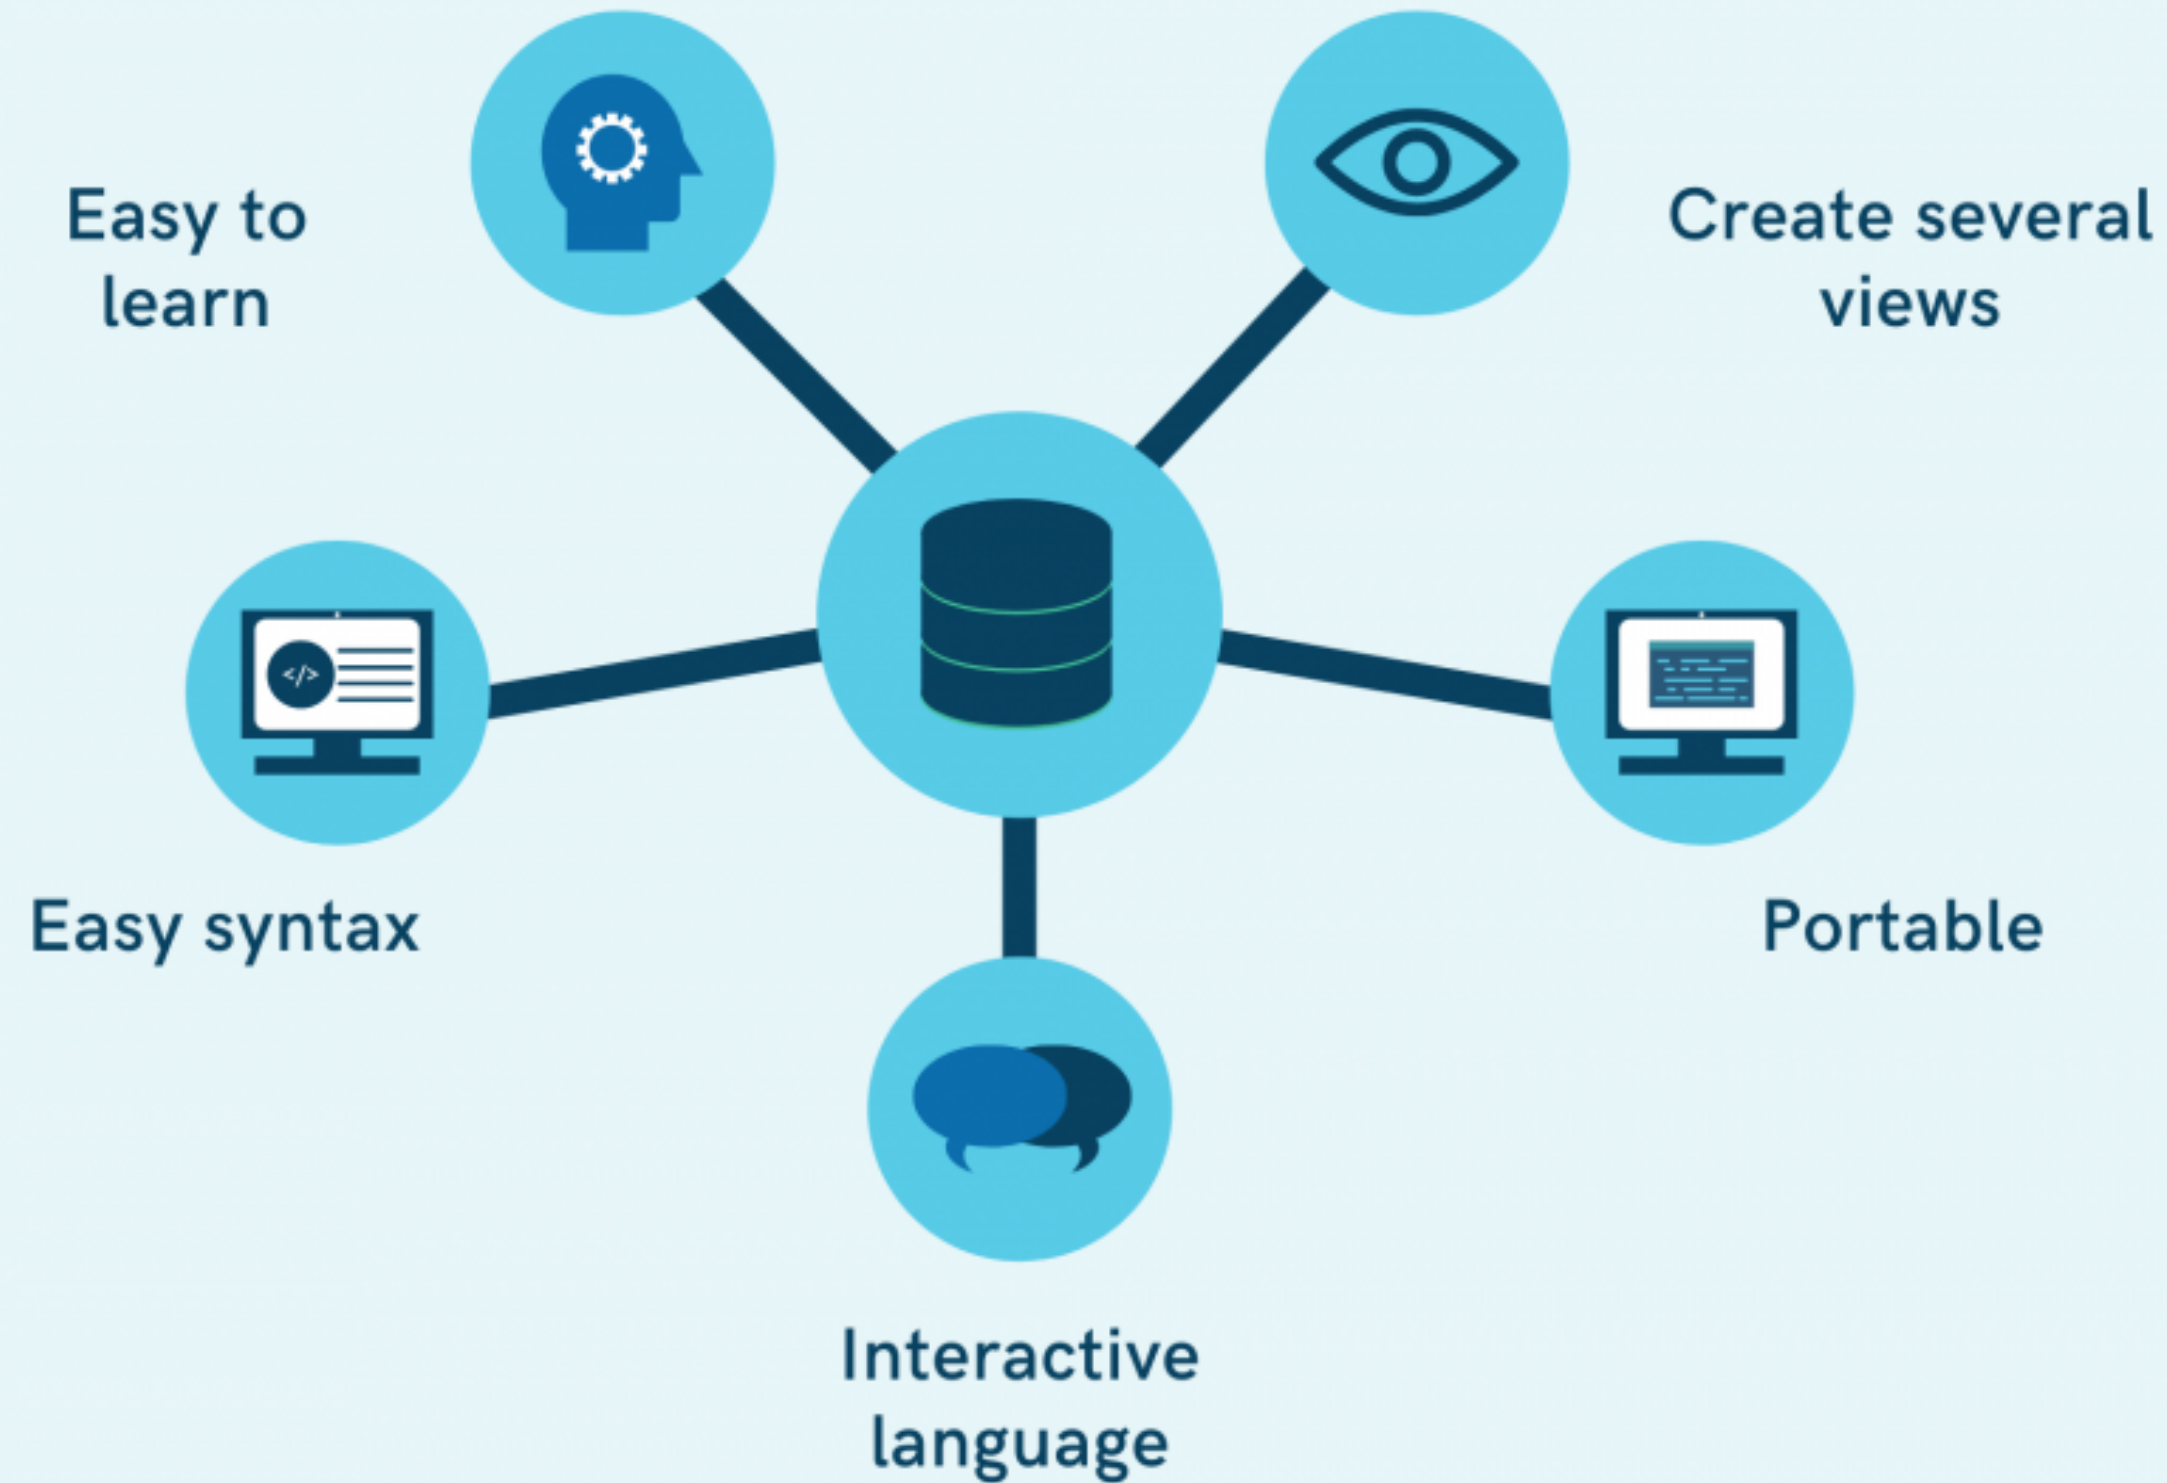

is a standard language used for storing, manipulating and retrieving data from relational databases.

Types of SQL Commands

ADVANTAGES OF SQL

Smart City is web-based software developed in Java programming language to store the details of a city. The main purpose of this project is to help the tourists and other visitors to the city by providing information about hotels, transportation facilities, air ticket booking, shopping details, city news, etc. The Smart City Java Project serves the visitors as a guide of the city, and hence the project is also called City Guide Project in Java.
